

DEMINING SUIT "HOT COUNTRIES" VERSION

This suit is designed for deminers and specialists in the armed forces and the police who search and locate mines and explosives.

The suit consists of a fragment proof overall, an improved ballistic vest and fragment proof detachable sleeves as an option. It is light weight and allows good mobility, which is essential when searching mines in difficult locations.

The overall and vest are opened in the back (no protection) for better adaptation to hot climates.

It protects the torso, the arms (if worn with the sleeves), the lower part of the body and the legs. The tactical vest can also be worn separately, in other assignments.

TECHNICAL DATA

Protection against fragments : V50 = 450 m/s
