

DEMINEING APRON

The Demining Apron was developed and tested in the field working with deminers working in extreme conditions. This apron provides protection of all vital areas.

It provides frontal protection against anti-personnel mines.

The demining apron integrates with our demining visor range by means of a frontal collar overlap ensuring protection continuity. The demining apron is extremely durable and serviceable in the field.

The collar is designed to overlap with the demining visor in order to prevent effects of blast and fragmentation from getting underneath the visor.

Second inner collar for additional throat protection. The shoulders and inner groin area have extra coverage protecting both the brachial and femoral arteries.

The demining apron works on a one size multi-adjustable system.

- Adjustable shoulder straps
- Adjustable waist strap
- Adjustable leg straps

Protections for arms and legs are available as options.

TECHNICAL DATA

Materials

Outer cover: Made from hardwearing 1000 denier Cordura® fabric

Inner liner: Made from comfort Poly Cotton

Protective materials: Multi-layer panels of Aramid enclosed in water resistant nylon casing.

Apron: Comes with standard protection level of V50 450m/s with 17grain FSP according to STANAG 2920.
